Press Release

New toll system in Poland: DKV Mobility offers pre-registration

European mobility service provider supports customers in switching from viaTOLL to eToll system

Ratingen, *15.07.2021*. On 30 September 2021, the viaTOLL system in Poland will cease and be replaced by the new, satellite-based eToll system. To manage the changeover to the new toll system, DKV Mobility will soon offer its customers a registration portal through which the registration for the new toll system and the exchange of toll boxes can conveniently be handled. Until the end of September, all viaTOLL boxes in circulation remain valid.

In the meantime, customers can pre-register for eToll here: e-toll Poland (dkv-mobility.com). By pre-registering, customers can benefit from an early and undisruptive transition and obtain new updates quickly.

"We have made all preparations to enable our customers to conveniently switch to the new Polish toll system," says Jérôme Lejeune, Managing Director Toll at DKV Mobility. "Our customers can continue to use the existing boxes as usual until the end

of September and will soon be able to conveniently switch to eToll via our registration portal".
